Search

The image shows a UI mockup for a search interface. At the top, there is a large white arrow pointing right with the word "Artists" and a small downward arrow inside it. To the right of the arrow is a search input field with the placeholder text "Search". A blue circle with the number "1" is next to the search field. Below the search bar, there are two columns: "Artist name" and "Similar artists". The "Artist name" column has three rows, each with a checkbox and the text "Artist name". A blue circle with the number "2" is next to the first row. The "Similar artists" column has three rows, each with the number "4". A blue circle with the number "3" is next to the first row. A hand cursor is pointing at the second row of the "Artist name" column. A blue circle with the number "4" is next to the second row.

Annotations

1. Search for an artist
 - By default, the top 100 most popular artists are shown
 - Pagination would be a nice to have
2. Artist thumbnail and name
 - Thumbnail helps distinguish between artists with the same name
3. Number of similar artists
4. Click to view artist details

Artist details

Only one tab, but more will be introduced in near future, so being consistent with the UI.

The UI mockup shows the 'Artist details' page. At the top, there is a header bar with a left section containing the word 'Artists' and a right section with a search input field labeled 'Type name or ID'. Below the header, the breadcrumb 'Search results > #Artist Name#' is displayed. A 'Similar' tab is active. Below the tab is an 'Add a similar artist' section with a search input field labeled 'Type name or ID'. To the right of this section is a 'Total: 3' label. Below the search input is a table with columns 'Artist name' and 'Weight'. The table contains three rows, each with a checkbox, the text 'Artist name', and a slider control. A hand cursor is shown interacting with the slider of the second row. Numbered annotations (1-7) point to specific UI elements: 1 points to the breadcrumb, 2 points to the 'Add a similar artist' input, 3 points to the 'Artist name' header, 4 points to the first row's checkbox, 5 points to the first row's slider, 6 points to the 'Total: 3' label, and 7 points to the second row's slider.

Annotations

1. Breadcrumbs include the name of the artist
2. Add a similar artist
 - a. Text search (can use ID)
 - if the box contains only digits, do an ID search, otherwise use the usual 'simpleSearch' API. In either case, the dropdown list of matches will display picture/artist title.
 - b. Shows a dropdown list of up to 10 artists

c. Results highlight the text match, example - user types "Blu":

■ **blur**

James **Blunt**

3. Sort by name or weight (low priority)
4. Artist thumbnail and name
5. Adjust weight by slider
6. Total number of similar artists
7. Hovering shows a delete icon, which must be clicked on to remove
 - a. Undo option would be a nice to have
